

Rules for review and publication of scientific articles

After receiving the article executive secretary makes an entry in the log and checks the article for compliance with the requirements of formulation.

Within 7 days executive secretary notify the authors of receiving articles via email and the compliance of the article with the specified requirements.

If the article is not formatted in accordance with the requirements, so within 7 days it is sent to the authors for re-formatting, whereof entry is made in the log.

Reviewing is compulsory for articles published in the journal.

Reviewing is carried out by members of the editorial board. In some cases scientists with more narrow specialization on the considered article profile may be involved in reviewing. Scientists may be either from the staff of the University and outside organizations.

The reviews of the received materials are logged by the secretary, and then sent to the authors by e-mail.

In case of rejecting the article publication, the editorial board sends the author a reasoned refusal.

The article not recommended by the reviewer for publication, is not re-reviewed and not sent to the author.

The positive review is not the sufficient ground for the article publication. The final decision on publication is made by the editorial board.

After the editorial board makes decision to publish the article, the executive secretary informs the author and indicates the date of publication.

When forming the next issue of the journal preference is given to articles in which results of researches, the most important for agricultural science and production are given. Also the editorial office tries as quickly as possible to publish the scientific data presented in the articles of graduate and doctoral students.
